Le Corbusier Une Petite Maison

The Le Corbusier Guide

The Le Corbusier Guide is an exceptional Complete Works edition that documents the enormous spectrum in the oeuvre of one of the most influential architects of the 20th Century. Published between 1929 and 1970, in close collaboration with Le Corbusier himself, and frequently reprinted ever since, the eight volumes comprise an exhaustive and singular survey of his work.

The Landscape within the House. A reflection on the relationship between landscape and architecture

Villa le Lac, which was designated a World Heritage in 2016, was designed and built by Le Corbusier as Geneva lakeside home for his parents in 1925. Because of its spare arrangement of spaces, he referred to it as a “dwelling machine.” Even today it remains the modern prototype of the “small house” that fulfills all of the functions of a residence with a minimum of floor area and seamless transitions between spaces. For the first time, this book is appearing in three separate language editions, following the original edition in which Le Corbusier documented the history of the building: with photographs, sketches and a poetic text. Access to the original photographs allowed the quality of the illustrations in this edition to be improved significantly.

La petite maison de Le Corbusier

The view of modernism as representing an epistemological break between technology and history and tradition has long been challenged. Le Corbusier’s work has proved to be an inexhaustible reference point in this debate. This is due, on the one hand, to the legacy of nineteenth-century historicism, and on the other to his creative process of creation through destruction which, as John Summerson has noted, is comparable to the processes of avant-garde poets and painters. The contributions to this book explore particular episodes which bring to light both the operative role of the past in the creation of a new abstract synthesis, and Le Corbusier’s modernist historical consciousness. They illustrate how the past participated in the modernist creative process of art, from the 1920s machine aesthetics to the late infatuation with myth. They also shed light on the extent to which the operative quality of the history was framed by a comprehensive historical vision that took the form of metanarrative, which neither the analytical studies on his architecture nor the synthetic approaches to his philosophical thinking should dismiss.

The Architecture of Light

Vogt’s investigation of LC’s early life and education not only reveals important, previously unacknowledged influences on specific projects such as the League of Nations headquarters and the Villa Savoye, but also suggests why LC throughout his career preferred to lift buildings above the ground, to give them the appearance of “floating.” This tendency had decisive consequences for buildings associated with the modern movement and continues to influence architecture today.

Le Corbusier - Øuvre complète Volume 7: 1957-1965

The pilgrimage church Notre-Dame-du-Haut in Ronchamp (1950–54), an icon of modern architecture, represents one of the central buildings of Le Corbusier’s late period. Like all the guides in this series, this book is indispensable both for a specialist audience and for tourists interested in...
architecture and modern art.

Privacy and Publicity

Une Peti Maison, 1923/English/French/German

Le Corbusier, the Noble Savage

From acclaimed biographer and cultural historian, author of Balthus and Patron Saints—the first full-scale life of le Corbusier, one of the most influential, admired, and maligned architects of the twentieth century, heralded a prophet in his lifetime, revered as a god after his death. He was a leader of the modernist movement that sought to create better living conditions and a better society through housing concepts. He predicted the city of the future with its large, white apartment buildings in parklike settings—a move away from the turn-of-the-century industrial city, which he saw as too fussy and suffocating and believed should be torn down, including most of Paris. Irascible and caustic, tender and enthusiastic, more than a mercurial innovator, Le Corbusier was considered to be the very conscience of modern architecture. In this first biography of the man, Nicholas Fox Weber writes about Le Corbusier the precise, mathematical, practical-minded artist whose idealism—vibrant, poetic, imaginative; discipline; and sensualism were reflected in his iconic designs and pioneering theories of architecture and urban planning. Weber writes about Le Corbusier's training; his coming to live and work in Paris; the ties he formed with Nehru . . . Brasilia . . . Malraux (he championed Le Corbusier's work and commissioned a major new museum for art to be built on the outskirts of Paris) . . . Einstein . . . Matisse . . . the Steins . . . Picasso . . . Walter Gropius, and others. We see how Le Corbusier, who appreciated governments only for the possibility of obtaining architectural commissions, was drawn to the new Soviet Union and extolled the merits of communism (he never joined the party); and in 1928, as the possible architect of a major new building, went to Moscow, where he was hailed by Trotsky and was received at the Kremlin. Le Corbusier praised the ideas of Mussolini and worked for two years under the Vichy government, hoping to oversee new construction and urbanism throughout France. Le Corbusier believed that Hitler and Vichy rule would bring about “a marvelous transformation of society,” then denounced the doomed regime and went to work for Charles de Gaulle and his provisional government. Weber writes about Le Corbusier's fraught relationships with women (he remained celibate until the age of twenty-four and then often went to prostitutes); about his twenty-seven-year-long marriage to a woman who had no interest in architecture and forbade it being discussed at the dinner table; about his numerous love affairs during his marriage, including his shipboard romance with the twenty-three-year-old Josephine Baker, already a legend in Paris, whom he saw as a “pure and guileless soul.” She saw him as “irresistibly funny.” “What a shame you're an architect!” she wrote. “You'd have made such a good partner!” A brilliant revelation of this single-minded, elusive genius, of his extraordinary achievements and the age in which he lived.

Eileen Gray

Now in its second edition: the trailblazing introduction and textbook on construction includes a new section on translucent materials and an article on the use of glass.

Le Corbusier - Œuvre complète Volume 1: 1910-1929

in 1923/24 Henry Frugès, a Bordeaux industrialist commissioned Le Corbusier and Pierre Jeanneret with a “small workers housing estate” in Lège and a garden city in Pessac, comprising 130 to 150 houses with shops. These two housing schemes fitted neatly into the architects research on standardisation and the “machine à habiter”, and provided a useful laboratory for gauging public opinion with regard to mass-production techniques in housing estates. One of the most striking features of the Cité Frugès was the use of polychromy on the exterior facades, to, in Le Corbusier's own words, “sculpt the space through the physical quality of colour - bring forward some volumes while making others recede. In short, compose with colour in the same way as we have composed with form. This is how architecture is transformed into urbanism.” Historical documents and drawings make this handy-sized volume an invaluable guide for visitors and a practical introduction for all architectural enthusiasts.

Le Corbusier: The Built Work

La exposición está dedicada a la faceta de Le Corbusier como productor de libros: 35 publicaciones que constituyen proyectos tanto intelectuales como materiales, cuya elaboración estuvo íntegramente dirigida por el propio Le Corbusier, sin contar entre ellos libros sobre su propia obra con contribuciones propias, numerosos artículos y proyectos editoriales incabados. La concepción gráfica de los libros de Le Corbusier se basa en los movimientos que transformaron la tipografía, el grafismo y el libro en el siglo XX. Le Corbusier se inscribe en la continuación de una cultura clásica que relaciona el libro con la arquitectura, reflejando su estrecha relación con las prácticas artísticas de sus contemporáneos, pero resistiendo en ocasiones a las corrientes de la época, especialmente las aportaciones de las vanguardias.

Le Corbusier, History and Tradition

In this study of Le Corbusier's American tour, Mardges Bacon reconstructs his encounter with America in all its fascinating detail. It presents a critical history of the tour as well as a nuanced and intimate portrait of the architect.

Immeuble 24 N.C. et Appartement Le Corbusier. Apartment Block 24 N.C. and Le Corbusier's Home

One of his very few built projects in the Americas, Maison Curutchet is a fascinating representation of Le Corbusier’s stylistic transitional period, bridging his late 1920s purism and the maturity of his later work in India. Like Casa Malaparte, this book offers an in-depth analysis of a single building through original documents, drawings, and photographs.
A Little House

The most thoroughgoing survey of nearly all of Le Corbusier’s extant projects, beautifully photographed and authoritatively detailed. Le Corbusier is widely acknowledged as the most influential architect of the twentieth century. As extensively researched and documented as his works are, however, they have never been exhaustively surveyed in photographs until now. Photographer Richard Pare has crossed the globe for years to document the extant works of Le Corbusier—from his first villas in Switzerland to his mid-career works in his role as the first global architect in locations as far-flung as Argentina and Russia, and his late works, including his sole North American project, at Harvard University, and an extensive civic plan for Chandigarh, India. Le Corbusier: The Built Work provides numerous views of each project to bring a fuller understanding of the architect’s command of space, sometimes surprising use of materials and color, and the almost ineffable qualities that only result from a commanding synthesis of all aspects of design. With an authoritative text by scholar and curator Jean-Louis Cohen, Le Corbusier: The Built Work is a groundbreaking opportunity to appreciate the master’s work anew.

Le Corbusier - Œuvre complète Volume 8: 1965-1969

Une petite maison

The renowned and highly influential architect, furniture-maker, interior designer and photographer Eileen Gray was born in Ireland and remained throughout her life an Irishwoman at heart. An elusive figure, her interior world has never before been observed as closely as in this ground-breaking study of her work, philosophy and inner circle of fellow artists. Jennifer Goff expertly blends art history and biography to create a stunning ensemble, offering a clear beacon of light into truly understanding Gray - the woman and the professional. Gray was a self-taught polymath and her work was multi-functional, user-friendly, ready for mass production yet succinctly unique, and her designs show great technical virtuosity. Her expertise in lacquer work and carpet design, often overlooked, is given due attention in this book, as is her fascinating relationship with the architect Le Corbusier and many other compelling and complex relationships. The book also offers rare insights into Gray's early years as an artist. The primary source material for this book is drawn from the Eileen Gray collection at the National Museum of Ireland and its wealth of documentation, correspondence, personal archives, photographs and oral history.

Le Corbusier – L'Unité d habitation de Marseille / The Unité d Habitation in Marseilles

A picture may be worth a thousand words but there is no real substitute for personal experience and anyone who has visited Le Corbusier knows just how true this is. This architectural guide tells you everything you need to know to get to his buildings including maps, directions, and visitor information.

Towards a New Architecture

Featuring over 100 of the most significant and influential houses of the twentieth century, For each of the houses included there are numerous, accurate scale plans showing each floor, together with elevations, sections and site plans where appropriate. All of these have been specially drawn for this book and are based on the most up-to-date information and sources.

Raumplan Versus Plan Libre

Originally published in Germany in 1968, this first comprehensive and critical survey of Le Corbusier’s life and work soon became the standard text on the architect and polyath. French, Spanish, English, Japanese and Korean editions followed, but the book has now been out of print for almost two decades. In the meantime, Le Corbusier’s archives in Paris have become available for research, resulting in an avalanche of scholarship. Von Moos’ critical take and the basic criteria by which the subject is organized and historicized remain surprisingly pertinent in the context of this recent jungle of Corbusier studies. This new, completely revised edition is based on the 1979 version published in English by the MIT Press but offers a substantially updated body of illustrations. Each of the seven chapters is supplemented by a critical survey of recent scholarship on the respective issues. An updated edition of this acclaimed book, an essential read for students of architecture and architectural history.

Key Houses of the Twentieth Century

This exceptional Complete Works edition documents the enormous spectrum in the oeuvre of one of the most influential architects of the 20th Century. Published between 1929 and 1970, in close collaboration with Le Corbusier himself, and frequently reprinted ever since, the eight volumes comprise an exhaustive and singular survey of his work.

Le Corbusier in America

Through a series of close readings of two major figures of the modern movement, Adolf Loos and Le Corbusier, Beatriz Colomina argues that architecture only becomes modern in its engagement with the mass media, and that in so doing it radically displaces the traditional sense of space and subjectivity. Privacy and Publicity boldly questions certain ideological assumptions underlying the received view of modern architecture and reconsiders the methodology of architectural criticism itself. Where conventional criticism portrays modern architecture as a high artistic practice in opposition to mass culture, Colomina sees the emerging systems of communication that have come to define twentieth-century culture—the mass media—as the true site within which modern architecture was produced. She considers architectural discourse as the intersection of a number of systems of representation such as drawings, models, photographs, books, films, and advertisements. This does not mean abandoning the architectural object, the building, but rather looking at it in a different way. The building is understood here in the same way as all the media that frame it, as a mechanism of representation in its own right. With modernity, the site of architectural production literally moved from the street into photographs, films, publications, and exhibitions—a displacement that presupposes a new sense of space, one defined by images rather than walls. This age of publicity corresponds to a transformation in the status of the private, Colomina argues; modernity is actually the publicity of the private. Modern architecture renegotiates the traditional relationship between public and private in a way that profoundly alters the experience of space. In a fascinating intellectual journey, Colomina tracks this shift through the modern incarnations of the archive, the city, fashion, war, sexuality, advertising, the window, and the museum, finally concentrating on the domestic interior that constructs the modern subject it appears merely to house.

Une petite maison
in 1952 Le Corbusier was commissioned "to dwell in the silence of men of prayer and study and to construct a church for them". The result was his impressive Convent of La Tourette, marking a significant step in modern religious architecture. Beginning with the rectangular form common to the Cistercian monastic tradition, he created a building whose stark form contrasts beautifully with the organic elements of the interior court and the grasslands surrounding it. The church itself is a model of simplicity, the cement has been left rough and the well located sources of light evoke a feeling of silence and reflection. The order's precept of prayer, study and reflection is aptly mirrored in the architecture. Like the other Le Corbusier Guides published by Birkhäuser, this volume provides a wealth of plans, details, photographs and information on this building which today is also a conference centre.

Constructing Architecture

Inhabitation is the primary action of becoming rooted with the land through settlement. The dwelling space is an expression of this bond – both inside and out. To feel oneself inseparably linked to a place, to exist in it perceiving it as an integral part of one's existential reality, is to place the landscape as the fundamental core of the living space. In the ancient forms of living, this core of domestic life was the hearth – archetypal representation of a purely introspective idea of architecture. Conversely, the landscape today represents a characteristic element of modern and contemporary inversions of the housing and typological modalities. The house meant shelter – a protective enclosure whose centralities were the fire and the patio; in the contemporary experience, we look away from the center and gaze towards outside. Reality is no longer impervious. Once changed into art, into a scenario, reality becomes domestic; it becomes landscape, the lifeblood of man's abode. Therefore, living a space is a conceptual and material expression of this current condition of belonging to places whilst remaining linked to perception.

Le Corbusier. Le Couvent Sainte Marie de La Tourette / The Monastery of Sainte Marie de La Tourette

Dieses Buch erzählt die Geschichte des kleinen Hauses, das Le Corbusier im Jahre 1923 bei Vevey am Genfersee für seine Mutter gebaut hat. Alle Texte sowie die gesamte grafische Gestaltung stammen von Le Corbusier.

Le Corbusier. Les Quartiers Modernes Frugès / The Quartiers Modernes Frugès

the construction of the apartment block at number 24, rue Nungesser et Coli in Paris, between 1931 and 1934, was an important milestone for Le Corbusier and Pierre Jeanneret. It was the first opportunity offered to them in France to put to the test theories on urbanism and architecture, which they had been working on since the 1920s ("cinq points de l'architecture moderne"), and marks an important stage on the path to Brutalism. And it is of all the more interest because of the apartment and art studio Le Corbusier designed for the top two floors of the building and in which he lived from 1934 until his death in 1965. Historical documents and drawings make this handy-sized volume an invaluable guide for visitors and a practical introduction for all architectural enthusiasts.

Le Corbusier

Reviewing the use of natural light by architects in the era of electricity, this book aims to show that natural light not only remains a potential source of order in architecture, but that natural lighting strategies impose a usefully creative discipline on design. Considering an approach to environmental context that sees light as a critical aspect of place, this book explores current attitudes to natural light by offering a series of in-depth studies of recent projects and the particular lighting issues they have addressed. It gives a more nuanced appraisal of these lighting strategies by setting them within their broader topographic, climatic and cultural contexts.

Le Corbusier Redrawn

The first biography and study of the work of Belgian landscape architect Jean Canneel-Claes, a significant but somewhat overlooked figure from the history of European modernism. In tracing his contributions, Imbert restores Canneel as a major figure in the development of landscape architecture into a modern discipline.

Between Garden and City

Villa le Lac, which was designated a World Heritage in 2016, was designed and built by Le Corbusier as Geneva lakeside home for his parents in 1925. Because of its spare arrangement of spaces, he referred to it as a "dwelling machine." Even today it remains the modern prototype of the "small house" that fulfills all of the functions of a residence with a minimum of floor area and seamless transitions between spaces. For the first time, this book is appearing in three separate language editions, following the original edition in which Le Corbusier documented the history of the building: with photographs, sketches and a poetic text. Access to the original photographs allowed the quality of the illustrations in this edition to be improved significantly.

Le Corbusier: the Chapel at Ronchamp

Le Corbusier

Le Corbusier (1887-1965) was the most significant architect of the twentieth century. Every architecture student examines the Swiss master's work. Yet, all too frequently, they rely on reproductions of faded drawings of uneven size and quality. Le Corbusier Redrawn presents the only collection of consistently rendered original drawings (at 1:200 scale) of all twenty-six of Le Corbusier's residential works. Using the original drawings from the Le Corbusier Foundation's digital archives, architect Steven Park has beautifully redrawn 130 perspectival sections, as well as plans, sections, and elevations of exterior forms and interior spaces. These remarkable new drawings - which combine the conceptual clarity of the section with the spatial qualities of the perspective - not only provide information about the buildings, they also help students experience specific works spatially as they learn to critically examine Le Corbusier's works.

Frank Lloyd Wright and Le Corbusier

Analyse: Construite par Le Corbusier en 1923 à Corseaux.
Nature and Space

Revealing the secret sources of Le Corbusier's architecture--concealed by the architect and undiscovered by scholars until now.

The Modernist Garden in France

This revised and updated edition looks anew at the respective merits of two giants of modern architecture. As well as featuring writings by the architects themselves, the book illustrates the evolution of the work of Loos and Le Corbusier, with detailed reference to their domestic projects, ranging from the Strasser House (1919) to the Last House (1932), and from Maison Domino (1915) to Villa Savoye (1932).

Une petite maison

The modernist garden, which flourished in France between the 1910s and the 1930s, vividly mirrored the geometries and cubist aesthetics familiar to the decorative and fine arts of the period. Created by architects and artists, these gardens were often conceived as tableaux in which plants played a role only as pigment or texture. This handsomely illustrated book by Dorothée Imbert presents for the first time - in word and image - a comprehensive study of these arresting architectonic gardens.

Le Corbusier's Maison Curutchet

This is the first book to give such close attention to Le Corbusier's approach to the making of buildings. It illustrates the ways in which Le Corbusier's details were expressive of his overall philosophical intentions. It is not a construction book in the usual sense - rather it focusses on the meaning of detail, on the ways in which detail informs the overall architectural narrative of a building. Well illustrated and containing several specially prepared scaled drawings it acts as timely reminder to both students and architects of the possibilities inherent in the most small scale tectonic gestures.
